

ABSTRACT OF THE DISCLOSURE

In an electric connection box constituted by arranging a bus bar circuit board constituted by arranging a plurality of bus bars having at least two kinds of different potentials on an insulating board in a vertical direction, in bus bar arrangement in which the bus bar having low potential and the bus bar having high potential are contiguously installed in a horizontal direction, the bus bar having the low potential is arranged on an upper side of the bus bar having the high potential in the vertical direction.
